

# PK 6501 / PK 7001-EH

*High Performance*

**PALFINGER CRANE**

**KTL**  
protected

**Paltronic  
50**  
controlled

**RRC**  
Radio Remote Control  
operated

**ISC**  
Integrated Stability Control  
monitored

**AOS**  
Active Oscillation Suppression  
inside

Compact service provider with huge outreach

## Multi-functionality for greater achievement

The PK 6501 is distinguished by its exceptionally high level of working efficiency. It can be used for a wide range of applications and is ideally suited for mounting on lightweight truck chassis. It is possible to position very heavy loads accurately and precisely thanks to the standard E-HPLS technology of the PK 7001 EH.

Matchless in even the most challenging situations

## Fast, flexible and precise

### Knuckle joint on knuckle boom

The knuckle joint significantly improves the crane's motion geometry.

### Maintenance-free extension system

With the maintenance-free extension system PALFINGER sets a clear path in easy servicing. The use of sliding elements made of special plastic in combination with the proven KTL cathodic dip painting means that the extension boom system no longer has to be serviced by the operator. This not only saves time and expense but also protects the environment.

### Control console

All important information about the crane can be seen on the main control stand. A digital indicator counts and displays the operating hours. Ergonomic control levers and the optional lighting package provide increased safety and comfort even in poor visibility conditions.

### Lighting package (optional)

The control stand is supplied on request with LED illumination and backlit symbols. LED warning lights are fitted on the outriggers to provide better visibility.

### Functional Design

Functional Design elements increase working comfort, protect against damage and make servicing and maintenance easier. The spiral tube hose optimally protects the hydraulic hoses from environmental influences, damage and dirt.

### Radio remote control

Radio remote control with digital data transmission (standard on EH models) offers maximum efficiency and comfort. The display integrated in the handset informs the crane operator continuously about the current capacity loading level of the crane.

### PALTRONIC 50

Modern electronics in the increasingly complex crane system offers safety and comfort functions which make the crane operator's work easier and increases the efficiency of the crane job.

## Enormous working radius enables new applications

### Outrigger system

All the outriggers are fitted as standard with a ball-jointed support plate that can be swivelled through 10°. This enables them to adapt optimally to the ground. The enlarged plate also reduces the pressure on the ground. The PK 6501 and 7001 EH *High Performance* fit onto all standard truck chassis frames. Three outrigger widths are available: 3.0 m, 9'10" (mechanical), 4.4 m, 14'5" (mechanical or hydraulic) and 5.0 m, 15'5" (hydraulic).

### Load-holding valve

They prevent the crane boom from dropping and are fitted as standard on all slewing, lifting, knuckle-boom and extension cylinders. The valves are positioned in such a way that they are protected against damage.

### Hose equipment for auxiliary equipment

Hoses providing oil supply for auxiliary equipment are routed in compact trays and protective chains. A clean design offers maximum service life.

### Return oil utilisation

The high speed of the extension system is impressive. It results from return oil utilisation, which is installed as standard, and the generously dimensioned hydraulic lines. This increases efficiency in all types of applications!

### KTL – the cathodic dip painting

The shot-blasted crane parts are covered in zinc phosphate in an immersion process and coated electro-statically. The subsequent two-component top coating of paint provides a surface protection which in the past was usually only found in the automotive industry.

### ISC (optional)\*

The integrated stability control (ISC) is a system that monitors the stability of the crane vehicle. The system adjusts the crane's lifting forces depending on the current stability support situation and the crane boom to ensure the vehicle's stability over the entire working area.

\* ISC or an alternative system for monitoring stability is mandatory in the version compliant with EN12999:2009.

### AOS (optional)

The Active Oscillation Suppression system available exclusively from PALFINGER compensates for jolts and sharp stress cycles caused by crane operation. Because oscillations are eradicated the crane can work with precision, much faster and therefore more cost-efficiently.
